

# Audio Jammers

## MDPB-L7C

### Key Features

- Anti-recording mobile power supply: not only an anti-recording device, but also a portable mobile power supply;
- Remote control switch: with wireless sensor, can achieve 1-20M remote control equipment switch operation;
- Good anti-recording effect: our self-developed FPGA-based ultrasonic noise algorithm can effectively interfere with mobile phones, recording pens and other digital equipment, the anti-recording effect is at an advanced level, and can effectively ensure that the conversation is not recorded, so as to ensure the security of information;
- Large scope: the protection range of a single anti-recording device is approximately a conical space, the interference range is about 15 square meters, and the interference distance of most mobile phones and other digital products is more than 2 meters, which can form a safe space, and there is no need to worry about being recorded by others in this space;

## Specifications

volume	140*65*22 (mm)
Interference intensity	120dB (30cm)
Interference distance	1-6 meters (different brands of mobile phones and recorder models are different distances)
Interference area	≥15 square meters
Interference Angle	180 °
Remote control system	The distance is 1-20M
Power supply mode	DC 5V/1A
Battery capacity	6000mAH
Endurance time	2-4H

## Equipment size

\*Please refer to the actual product. The equipment provides different customized styles.

## Applicable scenarios

Meeting

Conversation

Private Space
