

Audio Jammers

MDPB-S105

Key Features

- Measured Shielding Range of 1-5 Meters When a microphone is directly facing the shielder, the effective distance varies with different brands of smartphones and recording pens.
- Ultrasonic Interference Technology Based on the reflective properties of ultrasonics, this technology can interfere with the microphones in recording devices, rendering recordings ineffective. Additionally, it does not produce any buzzing noise.
- High and Low Frequency Sound Source Mixing Utilizes a process that mixes high and low-frequency sound sources, blending the original recording signal with the audio signal from the shielder. This makes the shielded recording unrecoverable in post-processing.
- Fully Autonomous and Controllable From design and manufacturing to production and after-sales, it operates under fully autonomous intellectual property rights. Completely self-controllable and reliable, meeting national policy requirements.

Specifications

volume	160*80*93 (mm)
Interference intensity	Greater than 80dB (at 1 m)
Interference distance	1-6 meters (different brands of mobile phones and recorder models are different distances)
Interference area	≥15 square meters
Interference Angle	360 °
Power supply mode	DC15V/5A
Battery capacity	8000maH
Endurance time	2-4H

Equipment size

*Please refer to the actual product. The equipment provides different customized styles.

Applicable scenarios
